Hey, go into the right hand drawer of the chest on the right in the lower right hand corner. There should be a Gold Collector key in there. However, it does not work unless the hard drive is enabled. GOLD COLLECTOR v1.0. The Steelbook Box is looking really awesome! Will get it in my collection as soon as it becomes available. Let me know if you are interested in the Steelbook. Thanks! Like I said, I would appreciate your opinion on the box. The box looks awesome! I would not be surprised if you are sold out before the release date. Please get your box. I would like to know what you think of it. Thank you for reading this and for your interest in the Steelbook box. I'm not in the International Steelbook game club, but if I was, I would definitely pick it up. If it is going to be in silver, I'd prefer the limited silver that you've shown us in your previous posts. You can always use two original silver stickers for an alternate look if you're wanting to. Silver is a lot more expensive than gold, so it's worth trying to save money by using stickers on the packaging if you can. Tubulin-alpha carboxy-terminal post-translational modification: identification of a novel protein in mammalian brain. Tubulin-alpha is a major microtubule protein and is known to undergo covalent post-translational modifications in vitro, such as tyrosination and acetylation. We have now identified a novel carboxy-terminal protein (CTP) that binds tubulin-alpha and that is phosphorylated in bovine brain in vivo. CTP was purified from bovine brain by binding to tubulin-alpha-Sepharose and eluting from tubulin-alpha-Sepharose by phosphocellulose chromatography. CTP is a 28 kDa protein that is phosphorylated in vivo by a kinase(s) dependent on cAMP. This novel protein has a structural motif typical of a member of the family of phosphatidylinositol kinase-related proteins (PIKPs) and we will refer to it as PIPK to distinguish it from the protein kinases of the PI3K family. The brain tissue from bovine, rat, and human contains CTP. Immunoblotting analyses of proteins extracted 82157476af
