.rb). #hanser-ga If you wanna play more in this rpg like setting up your character, buy an ose and leave comments about what you wanna do. A few words about the cosplay: Leia and Rey is my own concept. (Didn't take credit for that) And don't worry, I will never force you to do this cosplay. The present invention relates to a golf ball having a core and a cover enclosing the core. More specifically, the invention relates to a golf ball having a core which is composed of a blend of a relatively soft inner layer and a relatively hard outer layer, and a cover enclosing the core. In general, golf balls have been designed to achieve distance, and more recently to achieve both distance and control. Conventional, solid golf balls having a single core layer and a single cover layer are notoriously hard on the driver and hook shots, and these balls are difficult to control on approach shots. Efforts to improve the playability of golf balls have led to the use of multi-layered cores and covers. The use of dual core constructions is described, for example, in U.S. Pat. No. 4,781,383; U.S. Pat. No. 5,875,891; and U.S. Pat. No. 6,216,349. Other multi-layered core constructions, multi-layered core constructions having a cover or a cover having a plurality of mantle and/or intermediate layers are also known and used in various commercially available golf balls. The mantle and intermediate layers are typically made of a highly neutralized polymer, such as ethylene acid copolymer ionomer resins. These polymers provide a good combination of hardness and durability in order to provide a successful golf ball. In this regard, the ethylene acid copolymer ionomers may be described by the general formula: wherein wt % of the total composition is water. The ethylene acid copolymer ionomer resins are described in further detail in U.S. Pat. Nos. 4,884,814 and 5,451,623. These polymers are commercially available under the name SURLYN from E.I. du Pont de Nemours and Company, Wilmington, Del. The golf balls prepared from these ethylene acid copolymer ionomer resins are generally hard 82157476af
